Experiment # 1

Installation Of Ubuntu

Objective

Perform Lab Task Of Operating System Class.

Software Tool

1. Rufus
2. USB
3. Ubuntu ISO Image

1 Theory

As per Teacher instructions, I made a bootable USB for Ubuntu Operating System. I used Rufus Tool for making my USB a bootable device for Ubuntu. After that I used that USB to install Ubuntu on my machine. I have to keep my Microsoft Windows 10 on my machine so I moved my all data from one of my drive to make that empty and installed Ubuntu OS on it. Now I have 2 OS installed on my machine.

2 Task
